System & Method is strengthened through Merger.

The companies System & Method ApS, Agent Data ApS and Common Data ApS have after years of cooperation merged into one company System & Method A/S.

The result is a stronger company, with offices in Denmark, Brazil and Canada and more than 1000 customers worldwide.

Bent Rønne and Niels Liisberg from Agent Data are appointed as respective Technical Director and Director of Development. They will be leading the development department and a staff of experienced programmers. Martin Hecht Olsen will continue as CEO.

Common Data stepped into the merger with their own product. The result is an enhanced product portfolio, with a web based ERP solution based on Admin/400. The ERP solution will, as soon as the graphical interface is ready, be marketed as IceBreak Commerce and IceBreak Financials.

The platform is of course still System i™ (AS/400).

And talking about platforms; our latest activity as from February, is a Hosting Centre with 20 virtual System i™ servers – all based on the latest IBM Power technology. We are already hosting the first customers who are taking advantage of the IceBreak web technology – but who would have opted against the solutions, if they where to purchase a System i™ on their own.

Best regards,

System & Method International
